About the Author	iii
Figures and Tables	ix
Acknowledgments	xiii
Foreword	xv

1. INTRODUCTION 1

1.1 The Sea Maid's Music—An Ode to Pattern Recognition	4
1.2 Fisheries Science	8
1.3 Finding Our Way	12

2. TEASERS 15

2.1 The Pelagic Reproductive Strategy	15
2.2 Attraction to Floating Objects	16
2.3 The Huge Pelagic Fish Populations of the Peru Current	18
2.4 Density-Dependent Growth	19
2.5 Pacific Albacore Migration	20
2.6 Bluefin Tuna and Surface Fronts	20
2.7 Migrations of Short-Finned Squid	21
2.8 The Distinct Haddock Populations of Rockall and Faeroe Banks	22
2.9 The Blue Crab of Chesapeake Bay	22
2.10 Synchronous Low-Frequency "Regime" Rhythms	24

3. BEYOND EXPERIENCE 26

3.1 Very Thin "Soup"	26
3.2 Of Bathtub Oceans and Giant Guppy Tanks	28
3.3 Different Worlds—Different Rules	29
3.4 An Alternative Currency	30
3.5 Strategies for the Energy Battle	31
3.6 Adjusting to a Rotating Frame of Reference	33

4. INTERMITTENCY AND RISK 38

4.1 "I Be Here—But I Disappear"	38
4.2 High-Risk Strategies and Life-Cycle Weak Links	39
4.3 "Wasp-Waist" Ecosystems	40

5. ENRICHMENT PROCESSES (Enriching the "Broth") 43

5.1 Seasonal Overturn and Tidal Mixing	44
5.2 Coastal Upwelling	44

- 5.3 Shelf-Break Upwelling 47
- 5.4 Equatorial Upwelling 47
- 5.5 Wind Stress Curl 48
- 5.6 Vortex-Driven Upwelling 50
- 5.7 Upwelling Through a Stationary Thermocline 54
- 5.8 Coastal Runoff 56
- 6. CONCENTRATION PROCESSES (Thickening the “Soup”) 57**
 - 6.1 The Action Is at the Interfaces 57
 - 6.2 Surface Fronts 59
 - 6.3 Attraction to Drifting Objects (Revisited) 60
 - 6.4 River Plumes 62
 - 6.5 Intersections of Oceanic Water Masses 64
 - 6.6 Anticyclonic Wind Stress Curl 65
 - 6.7 Vorticity-Related Surface Convergence 66
 - 6.8 Microscale Stability 68
 - 6.9 Beneficial Microscale Turbulence 68
 - 6.10 Langmuir Circulations 69
- 7. TRANSPORT AND RETENTION (Getting “Home”) 71**
 - 7.1 Fish Larvae Are Not Drift Bottles 72
 - 7.2 The Stratified Taylor Column 73
 - 7.3 Dooley’s Hypothesis 76
 - 7.4 Shelf-Sea Fronts 77
 - 7.5 Surface Wind Drift 79
 - 7.6 Vertical Geostrophic Shears 83
 - 7.7 Bottom Boundary Layers 84
 - 7.8 Surface Wave Transport 86
 - 7.9 Slicks Coupled to Internal Waves 88
 - 7.10 The Geographical Scale of Recruitment 90
- 8. LONG-DISTANCE CONNECTIONS 92**
 - 8.1 El Niño 93
 - 8.2 Waves of Change 96
 - 8.2.1 Rossby Waves 98
 - 8.2.2 Coastal Kelvin Waves 101
 - 8.2.3 Equatorial Kelvin Waves 104
 - 8.3 Atmospheric Connections 106
 - 8.3.1 Walker Circulation and ENSO 106
 - 8.3.2 Teleconnections to High-Latitude Oceans 110

- 8.3.3 “El Niño North” 113
- 8.4 What Pulls the ENSO Trigger? 114
- 8.5 Atlantic El Niño 116
- 8.6 Poleward Displacement of Eastern Ocean Coastal Upwelling 117
- 8.7 The “Spring-Loaded” Coastward Flow Response to Relaxation of Upwelling-Favorable Wind 121
- 9. “BIO” SIZE SCALES: BODY LENGTH AND SCHOOL DIAMETER 126**
 - 9.1 School-Scale Effects on Nutrition and Growth 126
 - 9.2 Effect of Size-Dependent Predation 129
 - 9.3 Chain-Forming Dinoflagellates in the Spanish Rías 131
- 10. REPRODUCTIVE ACTIVITY HAS A TIME AND PLACE 135**
 - 10.1 The California Current 136
 - 10.2 The Benguela Current Region— Getting Around the Problem 143
 - 10.3 Southeast Brazil—A “Mirror Image” Configuration 146
 - 10.4 Brazil-Uruguay-Argentina—The Adaptable Anchovy 147
 - 10.5 The Peru Current—the “Numero Uno” of Pelagic Habitats 153
 - 10.5.1 Latitude-Dependent Ocean Dynamics 153
- 11. WINDOWS OF OPPORTUNITY 159**
 - 11.1 Correlative Approaches (or “At Least, Let’s Not Kid Ourselves”) 161
 - 11.1.1 Inflated Degrees of Freedom 161
 - 11.1.2 Problems with Significance Criteria 165
 - 11.1.3 Are Empirical Findings of Any Use? 166
 - 11.1.4 Patterns in Empirical Results 167
 - 11.2 Lasker Windows 168
 - 11.3 The SARP “Within-Year Exercise” 169
 - 11.4 Recruitment Independent of Parental Stock Size? (or “Let’s Not Kid Ourselves,” Part 2) 172
 - 11.5 The “Optimal Environmental Window” 174
- 12. HERE TODAY, GONE TOMORROW? 178**
 - 12.1 The Black Sea—Trouble at the Wasp Waist 178
 - 12.2 The Antarctic—Krill vs. Salps? 180
 - 12.3 Sardines and Anchovies—Alternating Regimes 182

- 12.3.1 Apparent Global Synchrony 184
- 12.3.2 Is It Temperature? 187
- 12.3.3 Regime Change in the Gulf of California 190
- 12.4 Tropical Analogs—Sardinellas, and So On 191
 - 12.4.1 The Brazilian Bight—Tropical/Temperate Species Mix 191
 - 12.4.2 The Guinea Current—Triggerfish and Other Wonders 193
 - 12.4.3 The Indian Oil Sardine—Newfound Reliability 195

13. WHAT'S GOING ON? 197

- 13.1 North Pacific Albacore (The Grandest Tour) 197
- 13.2 Bluefin Tuna and the Loop Current Front (Here, and Only Here) 203
- 13.3 Illex Squid Migrations (An Invertebrate “Donner Party”?) 205
- 13.4 The Prey Fights Back 210
- 13.5 The School as a Counteroffensive Weapon 213
- 13.6 Sticking with What Works 215
- 13.7 The School as a Low-Pass Filter 218
 - 13.7.1 Hypothetical Application to the Japanese Sardine 219
- 13.8 Global Warming—Coastal Cooling 223
- 13.9 A Sub-El Niño Frequency 227
 - 13.9.1 Again, Is It Temperature? 236
 - 13.9.2 Sardines vs. Anchovies 237
- 13.10 A Scenario for the Subarctic North Pacific 238

14. WHAT HAPPENS NEXT? 244

- 14.1 The Global Experiment 244
- 14.2 “Rosy” or “Bleak”? (Gulf of Guinea Example) 248
- 14.3 Fisheries Science 250
 - 14.3.1 A Bright Note 253
- 14.5 The Sea Maid’s Music 254
